

**Data Sheet****HMC554ALC3B****FEATURES**

Conversion loss: 8.5 dB

LO to RF Isolation: 37 dB

Input IP3: 20 dBm

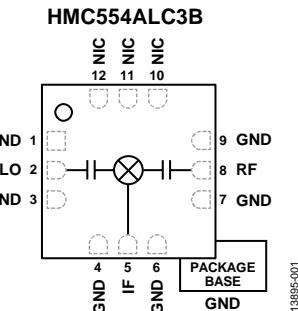

RoHS compliant, 2.90 mm × 2.90 mm, 12-terminal LCC package

**APPLICATIONS**

Microwave and very small aperture terminal (VSAT) radios

Test equipment

Military electronic warfare (EW); electronic countermeasure (ECM); and command, control, communications and intelligence (C3I)

**FUNCTIONAL BLOCK DIAGRAM**

13895-001

Figure 1.

**GENERAL DESCRIPTION**

The HMC554ALC3B is a general-purpose, double-balanced mixer in a leadless RoHS compliant LCC package that can be used as an upconverter or downconverter between 10 GHz and 20 GHz. This mixer is fabricated in a gallium arsenide (GaAs) metal semiconductor field effect transistor (MESFET) process, and requires no external components or matching circuitry. The

HMC554ALC3B provides excellent local oscillator (LO) to radio frequency (RF) and LO to intermediate frequency (IF) isolation due to optimized balun structures. The RoHS compliant HMC554ALC3B eliminates the need for wire bonding, and is compatible with high volume surface-mount manufacturing techniques.

## ABSOLUTE MAXIMUM RATINGS

Table 2.

Parameter	Rating
RF Input Power	25 dBm
LO Input Power	26 dBm
IF Input Power	25 dBm
IF Source/Sink Current	3 mA
Reflow Temperature	260°C
Maximum Junction Temperature	175°C
Continuous Power Dissipation, $P_{DISS}$ ( $T_A = 85^\circ\text{C}$ , Derate 3.7 mW/°C Above 85°C)	333 mW
Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-65°C to +150°C
Electrostatic Discharge (ESD) Sensitivity Human Body Model (HBM) Field Induced Charged Device Model (FICDM)	250 V; Class 0B 1250 V; Class IV

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

## THERMAL RESISTANCE

Thermal performance is directly linked to PCB design and operating environment. Careful attention to PCB thermal design is required.

$\theta_{JA}$  is the natural convection junction to ambient thermal resistance measured in a one cubic foot sealed enclosure.  $\theta_{JC}$  is the junction to case thermal resistance.

Table 3. Thermal Resistance

Package Type	$\theta_{JA}$	$\theta_{JC}$	Unit
E-12-4 <sup>1</sup>	120	195	°C/W

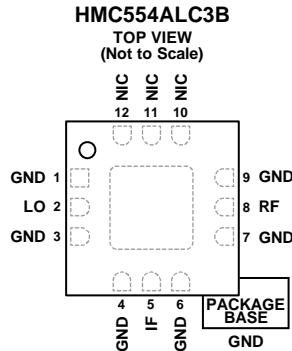

<sup>1</sup> Test Condition 1: JEDEC standard JESD51-2.

## ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

13895-002

Figure 2. Pin Configuration

Table 4. Pin Function Descriptions

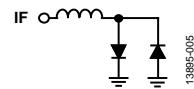

Pin No.	Mnemonic	Description
1, 3, 4, 6, 7, 9	GND	Ground. These pins and package bottom must be connect to RF/dc ground.
2	LO	Local Oscillator Port. This pin is ac-coupled and matched to 50 Ω.
5	IF	Intermediate Frequency Port. This pin is dc-coupled. For applications not requiring operation to dc, dc block this port externally using a series capacitor of a value chosen to pass the necessary IF frequency range. For operation to dc, this pin must not source/sink more than 3 mA of current or die malfunction and possible die failure may result.
8	RF	Radio Frequency Port. This pin is ac-coupled and matched to 50 Ω.
10, 11, 12	NIC	Not Internally Connected. These pins can be connected to RF/dc ground. Performance is not affected.
	EPAD	Exposed Pad. The exposed pad must be connected to RF/dc ground.

**SPURIOUS AND HARMONICS PERFORMANCE**

Mixer spurious products are measured in dBc from the IF output power level. N/A means not applicable.

**LO Harmonics**

LO = 13 dBm, all values in dBc below input LO level and measured at RF port.

**Table 5. LO Harmonics at RF**

LO Frequency (GHz)	N × LO Spur at RF Port			
	1	2	3	4
12	39	39	59	57
13	38	40	70	N/A
15	38	48	49	N/A
16	37	56	50	N/A
18	36	54	N/A	N/A
19	36	53	N/A	N/A
21	36	46	N/A	N/A

LO = 13 dBm, all values in dBc below input LO level and measured at IF port.

**Table 6. LO Harmonics at IF**

LO Frequency (GHz)	N × LO Spur at IF Port			
	1	2	3	4
12	38	77	67	89
13	41	63	74	N/A
15	44	72	56	N/A
16	42	53	56	N/A

## THEORY OF OPERATION

The HMC554ALC3B is a general-purpose, double balanced mixer that can be used as an upconverter or a downconverter from 10 GHz to 20 GHz.

When used as a downconverter, the HMC554ALC3B downconverts radio frequencies (RF) between 10 GHz and 20 GHz to intermediate frequencies (IF) between dc and 6 GHz.

When used as an upconverter, the mixer upconverts intermediate frequencies between dc and 6 GHz to radio frequencies between 10 GHz and 20 GHz.

## APPLICATIONS INFORMATION

### TYPICAL APPLICATION CIRCUIT

Figure 84 shows the typical application circuit for the HMC554ALC3B. The HMC554ALC3B is a passive device and does not require any external components. The IF pin is internally dc-coupled. The RF and LO pins are internally ac-coupled. When IF operation to dc is not required, using an external series capacitor is recommended, of a value chosen to pass the necessary IF frequency range. When IF operation to dc is required, do not exceed the IF source and sink current rating specified in the Absolute Maximum Ratings section.

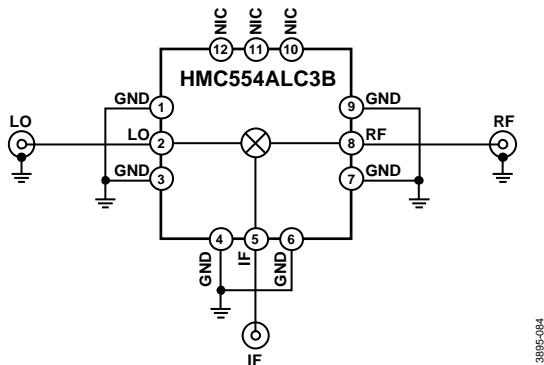

Figure 84. Typical Application Circuit

13895-084

### EVALUATION PCB INFORMATION

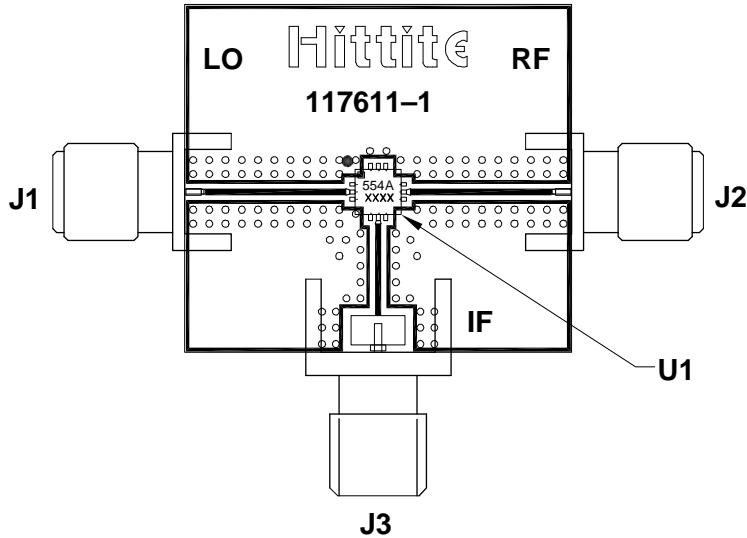

Use RF circuit design techniques for the circuit board used in the application. Ensure that signal lines have  $50\ \Omega$  impedance, and connect the package ground leads and the exposed pad directly to the ground plane (see Figure 84). Use a sufficient number of via holes to connect the top and bottom ground planes. The evaluation circuit board shown in Figure 85 is available from Analog Devices, Inc., upon request.
